

B1
Cand
c) a locking clip rotatably mounted on one of said first member and said second member so that said locking clip is engagable with the other of said first member and said second member and moveable between a first unlocked position and a second locked position for locking said first member and said second member in a relative axial position with respect to one another.

B2
4. (Twice Amended) The corpectomy device of claim 1 wherein said locking clip and said second member includes interengaging threads for locking said first member and said second member in a relative axial position with respect to one another, said locking clip being rotatably mounted on said first member for rotation into and out of engagement with said threads.

B3
11. (Twice Amended) The corpectomy device of claim 1 wherein said first member comprises a hollow member having a longitudinal axis and perforations for permitting ingrowth of bone, blood vessels and other tissue, said second member moveable in an axial direction with respect to said first member and having perforations for permitting ingrowth of bone, blood vessels and other tissue, said second member defining a chamber with said first member for movement in said axial direction; and said perforations includes:

all
C2
B3
Canal
i) elongated perforations extending in the axial direction on one of said first member and said second member;

and

ii) substantially circular perforations on the other of said first member and said second member.

26. (Twice Amended) The corpectomy device of claim 1 wherein said first member comprises a hollow, outer tubular member having a longitudinal axis and a passage,

5/13
B4
said second member comprises an inner tubular member moveable in an axial direction with respect to said first member, said second member defining a chamber with said first member and being slidably and telescopingly received in said passage of said first member for movement in said axial direction; and said outer tubular member including a wall having an inner surface defining said passage and an outer surface, said outer surface defining a circular cross-sectional shape.
